

Nu-Mark™ Marker

Shake it and
hear the difference!

NOT YOUR TYPICAL MARKER!

OUR MARKER LOOKS DIFFERENT BECAUSE IT IS DIFFERENT !!

There are as many markers as there are applications for them. Not all are created equal. If you have not found the right marker for your application, your search is over, try our **Nu-Mark** Marker! Our markers are built for Industrial/Professional use with high quality materials and include a unique valve that allows you to control ink/paint flow.

SPECIALTY MARKERS

PT2000 *Paint-This!* Paint Marker

- * Specifically developed for use on metal but will mark most surfaces
- * Generous paint supply
- * Fast drying
- * UV & Scratch resistant paint
- * Imparts distinct colors on most surfaces
- * Leaves long lasting marks on most surfaces
- * Wear resistant replaceable tip
- * Screw on cap can be removed with one hand
- * Pocket clip helps keep marker in pocket and prevents it from rolling away

Red White Blue Yellow Green Black

Ink -vs- Paint:

Ink (permanent markers) is translucent. Light is absorbed by the dyes and host surface. The result is that the ink takes on some of the color and tone of the surface.

Paint contains solids called Pigment. These solids reflect light back to our eye. This is why we see the color of the paint.

If color retention is important for your application then Paint Markers are the right choice.

Typically, Ink dries faster than Paint.

MO2000 *Mark-Off* Temporary Marker

- * Generous ink supply
- * Very dense ink
- * Fast drying
- * Marks on most surfaces
- * Ink washes off of Non-porous surfaces with soap and water
- * Wear resistant replaceable tip
- * Long shelf life
- * Screw on cap can be removed with one hand
- * Pocket clip helps keep marker in pocket and prevents it from rolling away

Black Blue

Our MO2000 marker uses a water soluble ink that marks on most surfaces and is easily removed from smooth non-porous surfaces with soap and water.

Not intended for use outdoors.
